### CERTIFICATE

This is to certify **Miss. Khandare Tanuja Netaji** has satisfactorily completed the project work on the title "**Online Fabrication Shopping Centre**" developed in "html , css , javascript , php Language" for the practical fulfilment of BCA-III(Semester-VI) submitted to Kamala college Kolhapur. During the academic year 2022-23 under my guidance. To the best of our knowledge and belief the matter presented by them is original work at not copied from any source.

### DECLARATION

I here with declare that the project entitle is "**Online Fabrication Shopping Centre**" Completed and written by me under the guidance of **Smt. Dnyaneshwari Desai**. I further submit that the project work has been done by me and it has formed the basis for the partial fulfilment of bachelor of Computer Application degree of Kamala college Kolhapur. The empirical finding in these reports is based on work carried out by me during the course of the project work.

Place: Kamala College, Kolhapur (Autonomous)

Kamala College Kolhapur(Autonomous)

## ACKNOWLEDGEMENT

We have to great pleasure in submission of the project report on “**ONLINE FABRICATION SHOPPING CENTRE**” in partial fulfilment of BCA-III (Semester-VI) While submitting this major project report, we take this opportunity to thank those directly or indirectly related to project work without their active co-operation and guidance it would have become extremely difficult to complete this task in time.

At the outset , we keep on giving deep gratitude towards our project guide. **Smt. Dnyaneshwari Desai** who gave guidance right from initial stage of project and offered me several valuable suggestions for developing this project in systematic manner.

We also thankful to all other teacher from computer department and all staff of computer lab

## **Introduction to Project**

The system provide online shopping website. An online shopping website project allow consumer to buy good or services online. Allows consumer to browse product , add item in cart and pay them consumer find product of interest by visiting website.An online shopping website, also known as an e-commerce website, is a digital platform where consumers can buy and sell goods or services online.

It allows businesses to reach a broader audience, process orders, manage shipping, and provide customer support. Online shopping offers convenience, saves time and fuel, and allows for easy comparison of prices. As of 2020 , custmor cam shop online using different devices online store custmor find product and purchase online. It facilitate transaction between buyer and seller.

The various front-end software used in the Online fabrication shopping project is Html, Css, Javascript (As Programming Language), Bootsrap Framework. Php ,Mysql server is used as the backend.

## **Existing System**

The existing system of online shopping involves consumers using a web browser or app to browse and purchase goods or services from a seller over the internet. Consumers can find products by visiting a website and buy products

- Browsing and Search
- Adding to Cart
- Payment and Delivery

Key features of the existing online shopping system:

- Convenience
- Variety and Choice
- Personalized Experiences
- Accessibility

# **Need and Scope of the System**

## **Need:**

- ❖ All manual calculation of sale or all the money management will be performed by the computer automatically.
- ❖ This system will provide timely report information.
- ❖ It will produce report for sale, bill information.
- ❖ The computer can hold amount of data in its storage device.
- ❖ The operation and speed of the computer is very high.
- ❖ We can calculate result and print any report within seconds.
- ❖ Any difficulties we can solve easily.
- ❖ A database application can be stored in computer effectively.
- ❖ It is very user friendly and easy to handle.
- ❖ So the computerized system is more suitable than the manual system.

## **Scope:**

The use of this system is being able to manage all necessary activities of the Ecommerce Shopping . The information management that provide by system is great advantages to reduce errors associated with products

- ❖ Be easy to operator.
  - ❖ Be easy to understand by the user and operator.
  - ❖ 100% customer satisfaction.
-

# **Organization Profile**

**Name : Fabrication Online Shopping Center**

## **Overview**

Customers shopping online at [www.wolfoxhop.in](http://www.wolfoxhop.in) can choose to immediately pick up their order from their nearest store with our Pick Up at Store feature or choose Express Delivery, to receive their product within 48 hours.

**Type :**Private

**Status :** Active

**Founded :** 2014

**HQ :** Kolhapur ,Maharashtra ,India.

**Phone No:** 6758903452, 9056271963

**Business :** Online Ecommerce Website

**Employees :**150

**Website :** <https://www.wolfoxin>

---

## **Proposed System**

The Online E-commerce system is easy to use and order. The customer selects the required products and orders them by a single click. Before it, the customer needs to create a login account and fill all the details like name, address etc.

The proposed system provides user friendly interface and also provides powerful and efficient Online Fabrication Shopping Center. The aim of proposed system is to develop a system of improved facilities. The proposed system can overcome the limitations of the existing system.

The system provides proper security and reduces the manual work. The proposed system tries to eliminate or reduce these difficulties up to some extent. The proposed system will help the user to reduce the workload and mental conflict. Through this system it is possible to print various reports and bills for the organization.

The aim of the proposed system is to develop a system of improved facilities.

- Greater efficiency.
- Better services.
- User friendliness and interactive.

# **Objectives**

The main objective of Online Fabrication Shopping Management Information System is to design and develop an online application

Specifically, the project will aim for the following objectives:

- ❖ To allow online customer shopping
- ❖ To maintain product and service Details
- ❖ To manage Order Online
- ❖ Reduce Manual work
- ❖ Provide convenient shopping experience
- ❖ Allow customer to choose product view Details and add item to cart
- ❖ Allow online Transaction system

# **Requirement Engineering**

Requirements engineering is the area of systems engineering that deals with the process of developing and verifying the system requirements. Following good requirements engineering practices helps achieve the primary objective of making sure that the delivered system meets the customer's needs. The requirements engineering process starts with requirements formulation, which is followed by validation, and then by verification.

Requirements formulation involves the collecting, organizing, communicating, and managing requirements. Requirements come from many sources: requirements can come from the customer, from environmental factors, from other system interfaces, from company facilities, from personnel safety, and from government regulations.

# **Requirement Gathering**

Requirement gathering is the process of identifying and documenting what a project needs to achieve, ensuring everyone understands the project's goals and objectives. It involves eliciting information from stakeholders, documenting those requirements, and ensuring everyone involved understands the scope and objectives.

This is process of identifying our project's exact requirement from start to finish. This process occur during the project initiation phases but, you'll continue mange to the project requirement throughout the project timeline

## **PHP:**

PHP is a general purpose scripting language geared toward web development. Stands for the recursive initialize PHP: Hypertext Pre-processor. It was originally created by Danish-Canadian programmer Rasmus leadoff in 1993 and released in 1995. The PHP reference implementation is now produced by The PHP Group. PHP was originally an abbreviation of Personal Home Page

PHP code is processed usually on a web server by a PHP interpreter implemented as a module, a daemon or as a Common\_Gateway Interface (CGI) executable. On a web server, the result of the interpreted and executed PHP code which may be any type of data, such as generated HTML or binary image data would form the whole or part of an HTTP response. Various web\_template\_systems, web content\_management systems, and web frameworks exist which can be employed to orchestrate or facilitate the generation of that response. Additionally, PHP can be used for many programming tasks outside the web context, such as standalone graphical applications and robotic drone control. PHP code can also be directly executed from the command line.

The standard PHP interpreter, powered by the Zend Engine, is free software released under the PHP License. PHP has been widely ported and can be deployed on most web servers on a variety of operating systems and platforms

---

## **XAMPP SERVER:**

XAMPP is an acronym that stands for Windows, Apache, MySQL, and PHP. It's a software stack which means installing XAMPP installs Apache, MySQL, and PHP on your operating system (Windows in the case of XAMPP). Even though you can install them separately, they are usually bundled up, and for a good reason too.

Instead of installing and testing Word Press on your hosting account, you can do it on your personal computer (local host).

XAMPP acts like a virtual server on your computer. It allows you to test all Word Press features without any consequences since it's localized on your machine and is not connected to the web.

First of all, this means that you don't need to wait until files are uploaded to your site, and secondly - this makes creating backups much easier.

XAMPP speeds up the work process for both developers and theme designers alike. What is more, you also get the benefit of playing around with your site to your heart's content.

However, to actually make the website go live, you need to get some form of hosting service and a Domain. See our beginner-friendly article about web hosting for more information.

In essence, XAMPP is used as a safe space to work on your website, without needing to actually host it online.

---

## **PHP MYADMIN:**

Php Myadmin is an open-source software tool introduced on September 9. 1998, which is written in PHP. Basically, it is a third-party tool to manage the tables and data inside the database. Php Myadmin supports various type of operations on MySQL. The main purpose of Php Myadmin is to handle the administration of MySQL over the web.

It is the most popular application for MySQL database management. WE can create, update, drop, alter, delete, import and export MySQL database tables by using this software. Php Myadmin also supports a wide range of operation like managing databases, relations, tables, columns, indexes, permission, and users, etc. on MySQL These operations can be performed via user interface, while we still have the ability to execute and SQL statement.

## **NOTE PAD++ :**

Notepad is a basic text editor that you can use to create simple documents. It hasn't really changed much even though all other standard Windows tools were upgraded with each new version. The most common use for Notepad is to view or edit text (.txt) files, but many users find Notepad a simple tool for creating Web pages

Windows Notepad is a simple text editor for Windows, it creates and edits plain text documents. First released in 1983 to commercialize the computer mouse in MS-DOS, Notepad has been part of every version of Windows ever since.

Notepad offers only the most basic text manipulation functions, such as finding and replacing text. Until Windows ME, there were almost no keyboard shortcuts and no line-counting feature. Starting with Windows 2000, shortcuts for common commands like "New", "Open", and "Save" were added, as well as a status bar with a line counter (available only when word-wrap is disabled). Before Windows 10 version 1809, Notepad could not properly interpret Unix-style or Mac-style newline characters. Windows 10 version 1809 also introduced the keyboard shortcut (deletes the previous word), zoom functionality, the ability to zoom in and out, and the "Search with Bing" function.

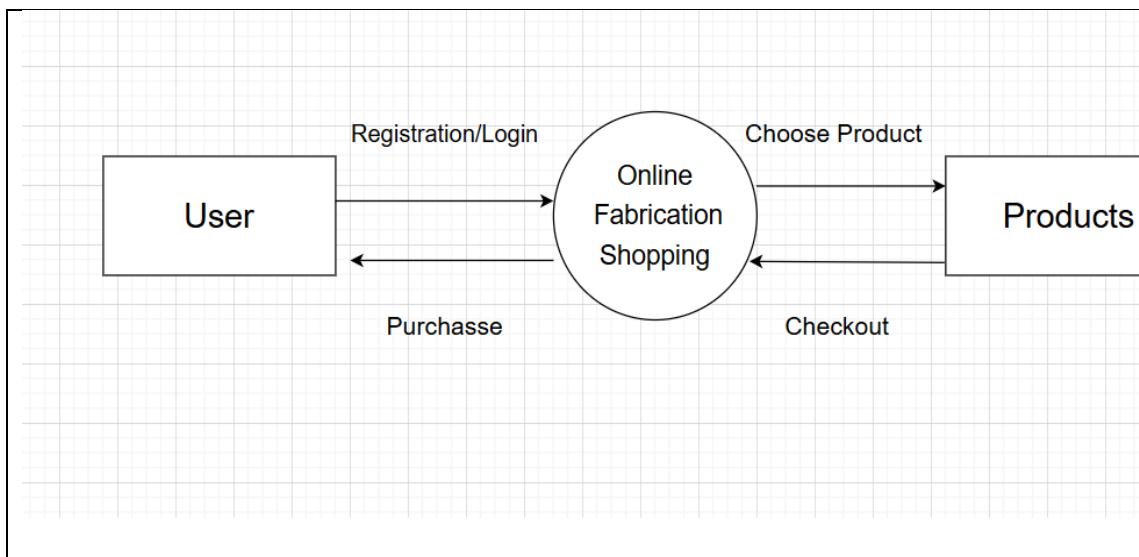

Improving performance has been the main focus of Notepad's development.

## Registration Table :

The screenshot shows the phpMyAdmin interface for the 'registration' table in the 'marvelous\_db' database. The table has 9 columns:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	<b>id</b>	int(11)	utf8mb4_general_ci		No	None		AUTO_INCREMENT	<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
2	<b>FullName</b>	varchar(30)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
3	<b>PhoneNo</b>	varchar(14)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
4	<b>Email</b>	varchar(30)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
5	<b>Location</b>	varchar(15)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
6	<b>City</b>	varchar(14)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
7	<b>State</b>	varchar(15)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
8	<b>Pincode</b>	varchar(15)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
9	<b>Password</b>	varchar(30)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>

## Products Table :

The screenshot shows the phpMyAdmin interface for the 'product' table in the 'marvelous\_db' database. The table has 4 columns:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	<b>id</b>	int(11)	utf8mb4_general_ci		No	None		AUTO_INCREMENT	<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
2	<b>ProductName</b>	varchar(30)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
3	<b>ProductDescription</b>	text	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
4	<b>ProductImg</b>	varchar(15)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>

## Cart Table :

The screenshot shows the 'Structure' tab for the 'cart' table in the 'marvelous\_db' database. The table has six columns:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	<b>id</b>	int(11)			No	None		AUTO_INCREMENT	<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
2	<b>pid</b>	int(11)			No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
3	<b>uid</b>	int(11)			No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
4	<b>ProductQuantity</b>	int(30)			No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
5	<b>ProductSize</b>	varchar(15)	utf8mb4_general_ci		No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>
6	<b>ProductTotal</b>	int(70)			No	None			<a href="#">Change</a> <a href="#">Drop</a> <a href="#">More</a>

Below the table structure, there is an 'Indexes' section showing one primary key index:

Action	Keyname	Type	Unique	Packed	Column	Cardinality	Collation	Null	Comment
<a href="#">Edit</a> <a href="#">Rename</a> <a href="#">Drop</a>	PRIMARY	BTREE	Yes	No	id	11	A	No	

## Order Detail Table:

The screenshot shows the 'Structure' tab for the 'orderdetail' table in the 'marvelous\_db' database. The table has five columns:

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra	Action
1	<b>id</b>	int(11)			No	None		AUTO_INCREMENT	<a href="#">Change</a> <a href="#">Drop</a>
2	<b>productid</b>	int(11)			No	None			<a href="#">Change</a> <a href="#">Drop</a>
3	<b>productquantity</b>	int(15)			No	None			<a href="#">Change</a> <a href="#">Drop</a>
4	<b>subtotal</b>	int(15)			No	None			<a href="#">Change</a> <a href="#">Drop</a>
5	<b>orderid</b>	int(14)			No	None			<a href="#">Change</a> <a href="#">Drop</a>

Below the table structure, there is an 'Indexes' section showing one primary key index:

Action	Keyname	Type	Unique	Packed	Column	Cardinality	Collation	Null	Comment
<a href="#">Edit</a> <a href="#">Rename</a> <a href="#">Drop</a>	PRIMARY	BTREE	Yes	No	id	27	A	No

## Add To Cart Page :

The screenshot shows a web browser window with the URL `localhost://marvelous/ProductDetail.php?pid=45&uid=3`. The page title is "Welcome to Marvelous Fabricators". The header features the company logo "MARVELOUS FABRICATORS" and social media links for Facebook, Google+, Twitter, and LinkedIn. On the right side of the header are email and phone contact details: [EMAIL](mailto:nikhil.alande@marvelousfab.com) and [CALL NOW](tel:+919146522).

The main content area displays a product image of a silver metal chair with a slatted backrest and a circular seat. To the right of the image, the product name is "Chair" and the price is "4000". The description states: "Iron and steel products are extensively used in many application, ranging from office furnishings to outdoor settings. Stainless Steel is used very extensively for most modern interior furnishings involving metal. Many hinges, slides, supports and body pieces are composed of Stainless. It has a high tensile strength, allowing it to be applied using hollow tubes, reducing weight and increasing user accessibility. Due to these features we make beautiful varieties of chairs." Below the description are two input fields: "Quantity" set to "2" and "Size" set to "35". There are two large, rounded rectangular buttons: a pink "Buy" button and a red "Add To Cart" button.

The footer contains a navigation bar with links for "Quick links", "Our Services", and "Contact Us".

## Add Cart Successfully :

The screenshot shows a modal dialog box with the text "localhost says" at the top and "Add Cart Successfully!" below it. In the bottom right corner of the dialog box is a blue "OK" button with a white border.

Product Details									
Sub Product id	Sub Product Name	Sub Product Description	Sub Product Price	Sub Product Image	Sub Product Quantity	Sub Product Size	Sub Product Total	Sub Product Delete	
45	Chair	Iron and steel products are extensively used in many application, ranging from office furnishings to outdoor settings. Stainless Steel is used very extensively for most modern interior furnishings involving metal. Many hinges, slides, supports and body pieces are composed of Stainless. It has a high tensile strength, allowing it to be applied using hollow tubes, reducing weight and increasing user accessibility. Due to these features we make beautiful varieties of chairs.	4000		2x4000	35	8000		
1	Three Burner Gas Range	It is designed to make your kitchen look appealing and elegant. It has spill-proof burner stands so there is no need to worry about the toppling of vessels. It has easy to use and ergonomically designed knobs. In addition, they are designed to avoid gas leakage for an efficient and safe cooking experience.	3000		3x3000	45	9000		
15	Chat Counter	We are on of the prominent manufacturers of wide range of Chat Counters. This product in high demand	8000		2x8000	30	16000		

## Checkout Page :

The screenshot shows a web browser window with the URL `localhost//marvelous/Checkout.php` in the address bar. The page has a black header bar with white text and links: HOME, ABOUT US, SERVICES, PRODUCTS, CONTACT US, a user icon, SHRUTI SUNIL SAKHARE, LOGOUT, and FEEDBACK. Below the header is a title "Checkout form". On the left, there's a section titled "Employee Details" with fields for Full Name (Shruti Sunil Sakhare), Phone No (4534239806), Email (shru123@gmail.com), and Location (Hupari). On the right, there's a "Your cart" section showing three items: Chair (2 units at 8000 each), Three Burner Gas Range (3 units at 9000 each), and Chat Counter (2 units at 16000 each). The total grand total is 33000. At the bottom left is a "Continue Payment" button.

# User Guideline

## • Installation Process

1. Download WampServer Go to the official WampServer wetisco (<https://www.wampserver.com/en/>) and click on the "Download button. Choose the appropriate version for your Windows operating system (32-bit or 64-bit)
2. Run the Installer. Once the download is complete, locate the downloaded file and run the installer (eg "wampserverX XX exe") If you encounter any security warnings. allow the installer to proceed
3. Choose Installation Language: Select the desired installation language and click "OK"
4. License Agreement: Read and accept the license agreement, then click "Next"
5. Select Destination Location: Choose the location where you want to install WampServer or keep the default selection. Click "Next" to proceed
6. Select Additional Tasks: You can choose to create a Quick Launch icon, a desktop icon, and associate php files with WampServer. Check the desired options and click "Next"
7. Ready to Install Review the installation settings and click "Install" to begin the installation process.
8. Windows Security Warning: If you receive a Windows Security Alert asking for permission to run the program, click Yes
9. Choose Browser: WampServer will ask you to select your default browser. Choose the browser you want to use and click "Open." from . Select the version you prefer and click "Next"

10. Select PHP Version: You will be presented with different PHP versions to choose
11. Create an Alias: Optionally, you can create an alias for your localhost. An alias allows you to access your projects using a friendly URL. Enter an alias name (eg.. "myproject") and click "Next"
12. Ready to Install: Review the installation settings again and click "Install" to start the installation process
13. Installation Progress. The installer will copy files and configure settings. Wait for the progress bar to complete
14. Completing the WampServer Setup: Once the installation is complete, you'll be asked to set your default browser again. Choose the browser and click "Open." Click "Finish" to complete the setup
15. WampServer Icon Look for the WampServer icon in your system tray (located at the bottom right of your screen). It should be green or orange, indicating WampServer is running. that

## **Conclusion**

The project “Online Fabrication shopping Center” was designed successfully. It was executed with successful database connectivity. As the project has html,css,Javascript as the front end and php as the back end, it has been tested through the system testing of each and every module. The customer can buy products through the online management website.

## Future Enhancement

- We will host the platform on online servers to make it accessible worldwide.
- **Payments Options** – Addition of different payments methods can be included, such as Paytm, Pay Cards, Mobile Wallet.
- **Delivery Options** - Add delivery options.
- Adding of Search Bar can be included further.
